

JS Todos Exercise

Part 1

For this assignment you will be combining your knowledge of DOM access and events to build a todo app!

As a user, you should be able to:

- Add a new todo (by submitting a form)
- Mark a todo as completed (cross out the text of the todo)
- Remove a todo

Part 2

Now that you have a functioning todo app, save your todos in localStorage! Make sure that when the page refreshes, the todos on the page remain there.

Solution

See [Our solution](#).
